Real Estate CRM on HubSpot

Lead-to-deal pipeline, automation and data governance

Demo project with sample data | Mazen Mohamed, Operations & CRM Specialist

Lead management with built-in data quality

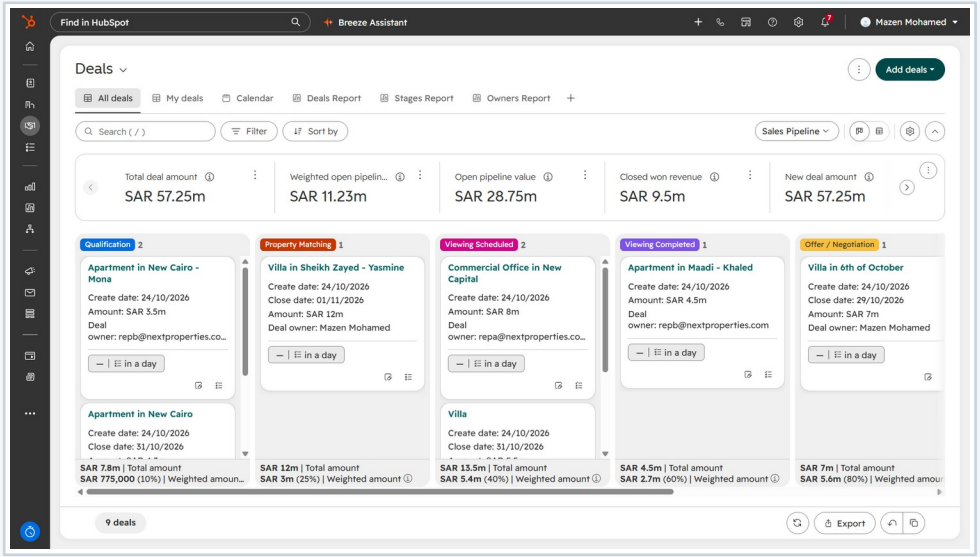

- 15 sample leads from 5 sources: Website, Facebook, Referral, Walk-in, Portal
- Qualification Status: New, Contacted, Qualified, Unqualified, Unresponsive
- Kanban view with data-quality cards: missing owner, email and lead source
- Every lead gets an owner and a follow-up task automatically

Kanban by qualification status, with data-quality checks on top

Sales pipeline built for real estate

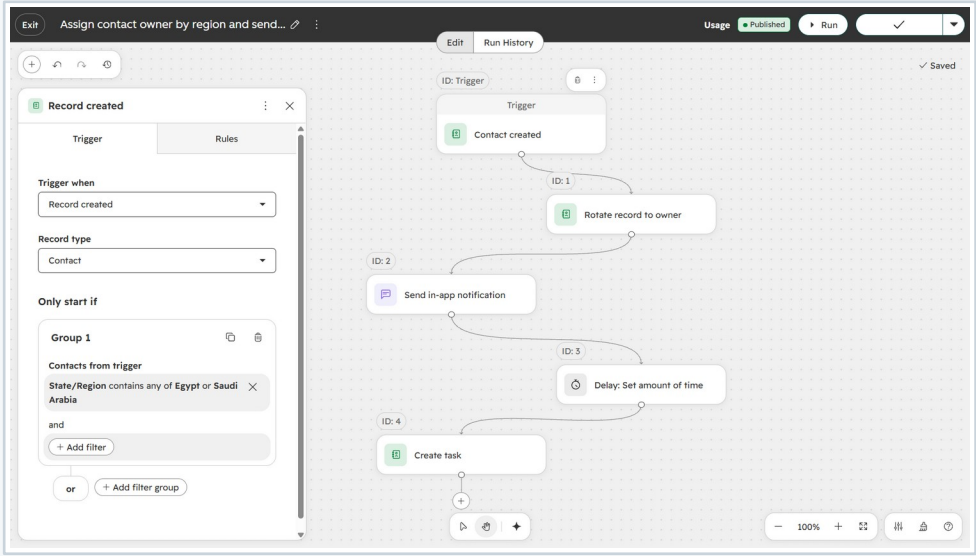

- Stages: Qualification, Property Matching, Viewing Scheduled, Viewing Completed, Offer / Negotiation, Closed
- Stage probabilities (10% to 80%) drive a weighted forecast of SAR 11.23m
- 9 sample deals across Egypt, Saudi Arabia and UAE; entered in local currency and reported in the company currency (SAR)
- Viewing stages reflect how property sales actually progress

Deals board with totals and weighted amounts per stage

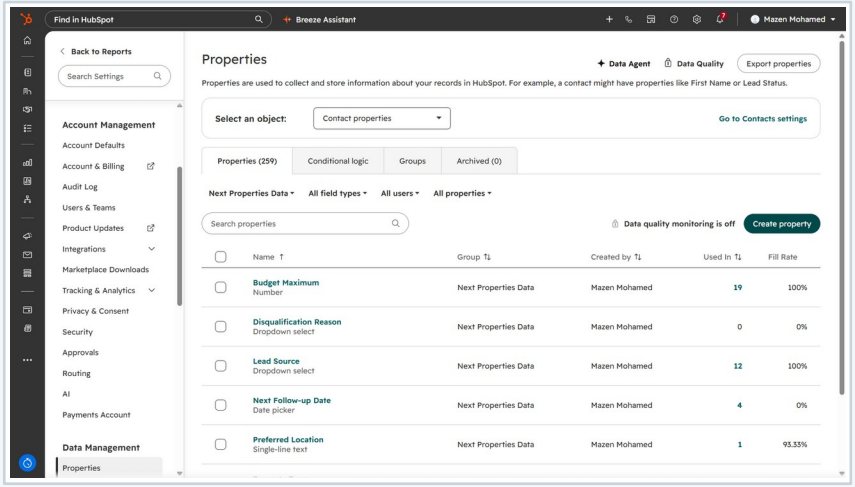

Automation: speed to lead

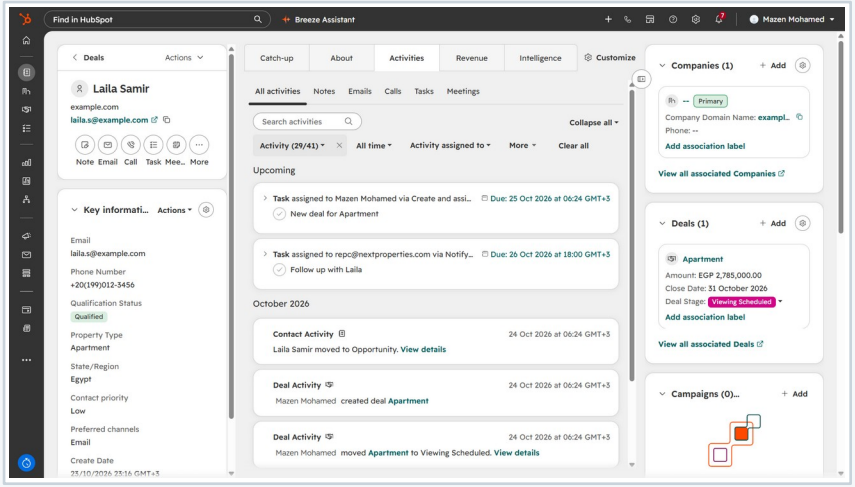

- Trigger: contact created in Egypt or Saudi Arabia
- Rotate owner, send in-app notification, wait, create follow-up task
- Variants by region (Egypt/Saudi, UAE) and property type (Apartment, Villa)
- New deal creates tasks; new owner gets a follow-up task
- Result: 23 follow-up tasks, no manual assignment

Owner-assignment workflow by region

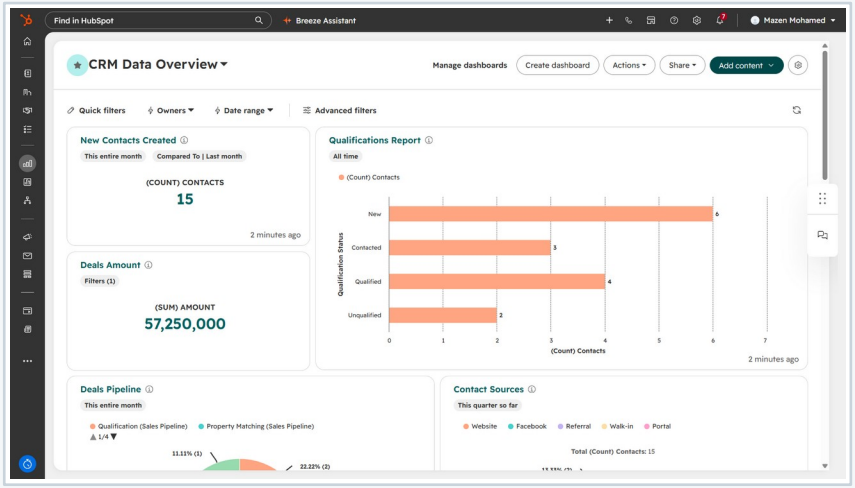

Data model and governance

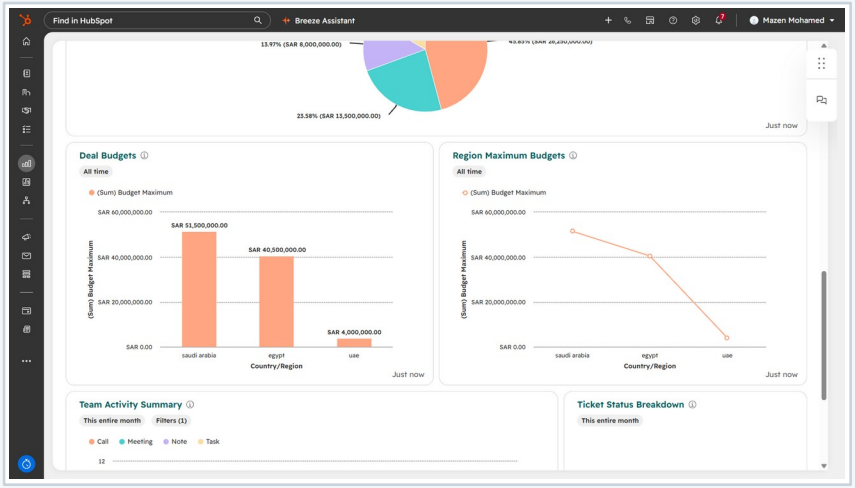

- Custom property group: Budget Maximum, Lead Source, Disqualification Reason, Next Follow-up Date, Preferred Location
- Contact record links company, deal and activity timeline; fill rates show which fields need enforcement
- Data quality monitoring is a paid feature: first recommendation for production

Dashboard: one view for management

- Lead qualification report, total deal amount, contact sources and deals by stage and owner
- Deal budgets by country and region
- Built to answer: where do leads come from, and where do deals get stuck?

What I would build next

- Rebuild the same design in Zoho CRM: Lead to Contact to Deal, Blueprint and Workflow Rules
- Speed-to-lead KPI: time to first contact, per owner and per source
- Duplicate management and data-quality monitoring (paid tier)
- WhatsApp lead capture through an automation platform
- Lost-reason reporting to learn why deals close lost

Note: built on a HubSpot account with sample data. It is a learning project, not a production system.
